

Traditional gas turbine repair and maintenance services have a bit of a reputation for inflexibility.

We believe there are better ways to keep your turbine in good shape.

Keep the years at bay through our balanced maintenance programmes, innovative repair and overhaul packages and liberating commitment to customer service.

Alba Power is one of the UK's leading Rolls-Royce aero-derivative gas turbine specialists, set up to offer gas turbine owners an ultra-responsive and cost-effective range of support, overhaul and maintenance services.

In particular, Alba Power specialises in the smart recycling and revitalisation of fully overhauled turbines and components to increase turbine maintenance life and minimise downtime.

To achieve this goal, the company has invested heavily in building up the world's largest stocks of Avon and Olympus spare parts and consumables, not to mention one of the world's biggest lease and exchange fleets of gas turbines.

Alba Power now holds over three million product lines in stock, from which it runs a highly efficient exchange programme for quality-assured gas turbine spare parts.

The company also specialises in developing innovative bespoke solutions to enable customers to maximise the reliability and cost-effectiveness of their gas turbine operations.

The company also has its own purpose-built engine test facilities, which have been developed for accelerated test programmes and to offer a variety of client witness options.

This test facility includes a state-of-the-art Allen Bradley control system, and has one of the highest first-time test pass rates in the industry.

Alba Power has built its reputation on offering cost-effective and extremely responsive alternatives to traditional gas turbine support services.

Alba Power gas turbine flexibility

- 24-hour international call-out
- Prompt site inspections
- Full on-site turbine changeout
- Parts exchange programmes
- Engine exchange and lease options
- Tailored maintenance programmes
- Repair management programmes

Alba Power operates from a custom-built gas turbine workshop and stores facility, which has been doubled in size in 2009, near Aberdeen, Scotland, the "Oil Capital of Europe".

Maintenance and support programmes are tailored to suit every individual customer, and can extend to long-term support agreements designed to anticipate any shortfall in OEM support.

All Alba Power operations, including field maintenance and performance testing, are fully accredited to ISO 9001, and carry long-term warranty and insurance protection.
